

The Quandis Valuations Hub will allow you to merge and manage the placement, distribution and delivery your valuation orders. The Quandis Hub system provides a portal to place valuation orders to multiple vendors at one time, based on rules and guidelines you establish for distribution. All completed valuations will be centrally located and accessible. This eliminates the need to access each valuations vendor's website to access, view and distribute the valuations.

Key Features:

- Vendor Management
- Auto assignment has been structured to assign orders by property location, allowable volumes and many other client preferences
- Logic incorporated into the valuation ordering process, with accurate and logical data
- Interface with systems such as MSP and other homegrown systems
- Handles any file size and unlimited photo storage

Additionally, users can view a history of all valuations ordered for a property over time, see comparable values, view a map of default activity in the area, and use this rich data set to drive decisions in their business process.
